coding or client pull is a style of network communication where the initial request for
data originates from the client, and then is responded to by the server. The reverse is
known as push technology, where the server pushes data to clients.. Pull requests form
the foundation of network computing, where many clients request data from centralised
servers.

buoy or leg float is a figure-eight shaped piece of closed-cell foam used in swim
workouts. Swimmers place the buoy between their thighs or their ankles to provide
support to the body without kicking their legs; this allows the swimmer to focus on
training only their arms and developing both endurance and upper body strength.

Engineered specifically for swimming pool gates, the MagnaLatch Top Pull is the ultimate
pool safety gate. Designed to extend above the height of the fence to keep the release
knob out of the reach of children, it is also key-lockable for added safety. MagnaLatch
Top Pull features D&D's patented "Lost Motion Technology", which stops the latch

from disengaging due to shaking or move the gate.
