the pulse test 4.1 Based on the measurements of force and displacement at the pile top, possibly combined with those from accelerometers or strain transducers located further down the pile, these test methods measure the pile top deflection in response to an axial compressive force pulse. The relatively long duration of the force pulse compared to the natural period of the test pile causes the pile to ...

the pulse test An electromagnetic pulse (EMP), also sometimes called a transient electromagnetic disturbance, is a short burst of electromagnetic energy. Such a pulse's origination may be a natural occurrence or man-made and can occur as a radiated, electric, or magnetic field or a conducted electric current, depending on the source.. EMP interference is generally disruptive or damaging to electronic ...

the pulse test An EMP pulse is electromagnetic energy. Once an EMP interacts with metal/wire it creates an electrical pulse in the metal. It will go to "ground" much like an electrical circuit -which incidentally is why electrical items get damaged by an EM pulse.
